

Experts at finding the perfect solution

We solve your transportation problem – no matter how tough the conditions are.

Take advantage of our unique capacity for solving problems pertinent to the industry – combined with the guarantee of a corporation successful the world over!

CRAYLER transportable forklifts have proven themselves in the widest variety of jobs – no matter how difficult they are.

Experience, innovation and reliability

Experience and innovation

As part of the PALFINGER Group with its corporate success story spanning almost 80 years, the team behind CRAYLER transportable forklifts has been consistently pursuing the goal of building the best transportable forklifts in the world. The development of powerful and innovative forklifts has benefited from extensive knowledge and experience in the areas of mechanical engineering, vehicle manufacturing and the transportation industry.

Quality and reliability

Build Quality. The source of a reliable and successful product can be found in the build quality. Finite Element calculations, field and ongoing tests, strain gauge measurements, and transport simulations all guarantee an optimal weight-performance ratio.

Quality of parts. Optimal corrosion protection with cathodic dip painting (KTL) and powder coating for all forklift components as well as high-grade hydraulics and electrical components by notable suppliers guarantee a long-lasting forklift.

Design. Functional design elements increase on-the-job comfort and facilitate service and maintenance. In addition to the functional advantages, a visually attractive product also has a priceless PR effect.

3-year guarantee – Proof of quality and reliability. We are absolutely convinced of the reliability of our products. That's why we offer a 3-year or 1,200-hour guarantee on chassis, frames, steering brackets, and mast sections!

User-friendly electronics. Simple electric functions make operating effortless, prevent downtime and facilitate maintenance.

Because it's got a lot going for it

Top Performance

- Maximal performance and power on account of premium engines
- Optimal maneuverability: exceptional mobility with a 180° steering angle
- Sturdiness and stability
- Maximal all-terrain mobility
- Compact dimensions
- Maintenance-friendly due to simple and precise hose routing, user-friendly electronics, and functional design elements
- Extensive array of equipment options

Optimized for use

- With a CRAYLER you optimize the overall costs of your forklift during its entire lifespan.
- Simple electric functions make operating effortless.
- Functional design elements facilitate service and maintenance.
- Service made simple: Comprehensive service network and a permanent supply of spare parts

CRAYLER makes your life easier!

Comfort and safety

"Take a seat!"
CRAYLER transportable forklifts impress operators

with their ergonomic construction. Located in the centre of the forklift, the workstation gives operators an ideal overview and allows them to "relax" on the job. Centrally seated the driver is also optimally protected away from the potential crush areas at the sides and behind the strong mast in case of rollover.

Environmental protection

Eco-friendly motors and ecological painting technologies are nothing new to CRAYLER. All forklift components requiring corrosion protection are applied with a chrome VI-free coating that exceeds legal requirements!

Low Operating Costs

For the businessman, the total costs of the investment products over their entire lifetime, represent a significant purchasing decision.

Minimum maintenance due to the sophisticated structural design, excellent conservation of value due to KTL cataphoretic dip painting and the use of high-quality parts in addition to an optimised spare parts supply reduce these costs and clearly argue in favour of a CRAYLER transportable forklift from PALFINGER!

We are the service champions!

Comprehensive service and spare parts network

With roughly 4,000 sales and service centres worldwide, PALFINGER

offers an unparalleled service network. As service champion in the industry, we accompany our clients throughout the entire life-cycle of a product – from initial contact to the provisioning of spare parts.

"We take the concerns of our customers seriously!"

A dialogue among clients, dealers and service partners

Realizing that "the customer is the best developer", we always

have an open ear for customer demands and ideas. In the development phase, we attempt to incorporate features into our new machinery that will ultimately benefit the customer in terms of on-the-job comfort, technical advancements, safety, and assembly and service friendliness.

Competent, reliable, fast

Naturally, our service partners are also in close contact with

our customers. Their demands, too, are incorporated into our products. In periodic quality circles comprised of service, development, and quality control departments, market needs and ideas are analyzed, forwarded and integrated into the future development of our products.
