

Superior safety, greater stability,
Faster transfers, enduring reliability

Low tare weight =
Better payload

Most stable side lifter in
the world. Lifting 35 or
40 ton containers

Fastest transfer. Empty
trailer can move in or
out beneath the
suspended container

Support legs do not
rest on adjacent
trailer or truck chassis

Fitted with locally
backed running gear
(reliability & spares
availability)

Load or unload other
vehicles while the
Swinglift itself is
loaded.

Infra red alignment
system for easy
alignment with containers

Once you've owned a **SWINGLIFT®** you won't want any other side loader!

Reliable, maintenance
friendly system. No
computerized
components (less
unnecessary downtime)

Lift or place containers
anywhere even up
against a wall or another
container

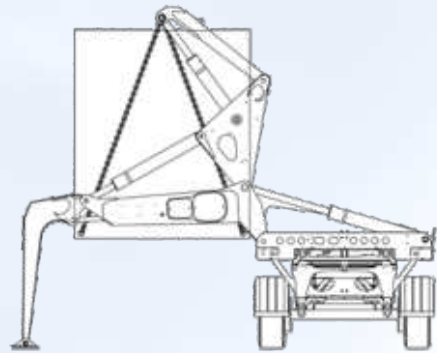

Hard chromed pins
with expanding bushes
for ultimate lifespan

Proven design -
oldest units are over 45
years old and still
running

Load rail wagons
without placing support
foot onto it & no
modifications needed.

Safety and stability

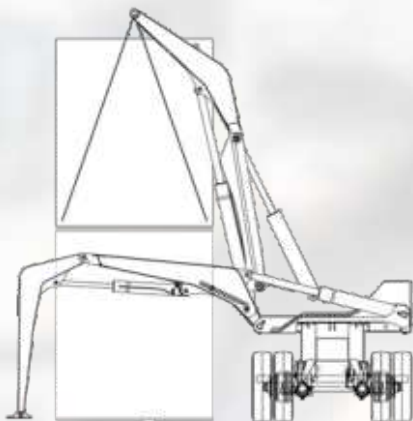

Swinglift® has been the most stable container side loader in the industry. Its original Leg-Over® design offers greater stability than other manufacturers "fulcrum type" leg designs and most reasonable sloping terrain is handled with ease. The Leg-Over® design ensures that there is no uplift on the chassis and the Swinglift® stabilizer arms also provide a complete safety barrier between the operator and the container.

High Lift - Double Stack

Designed for transport companies that have a requirement for double stacking of heavy containers up to 35 Tons.

Lifting Capacity: 35 Tons or 40 Tons
Containers: 1 x 40' 1 x 20' 2 x 20'
